PROJECT SUN STREAK

WARNING NOTICE: INTELLIGENCE SOURCES AND METHODS INVOLVED

PROJECT NUMBER: 8914-I

SESSION NUMBER: 1

DATE OF SESSION: 890418

DATE OF REPORT: 890420

START: 1010

END: 1103

METHODOLOGY: CRV

VIEWER IDENTIFIER: 018

1. (S/NF/SK) MISSION: Describe the most unique aspect and function of the target site and provide an overhead sketch of the target area.

2. (S/NF/SK) VIEWER TASKING: Coordinates. After viewer was in stage 4, the cues "ask the individual you have acquired about the site," "what is the most unique aspect and function of the site," and "what is the relationship of the black material to the place" were given. *Overhead photo not provided to the viewer or the facilitator.*

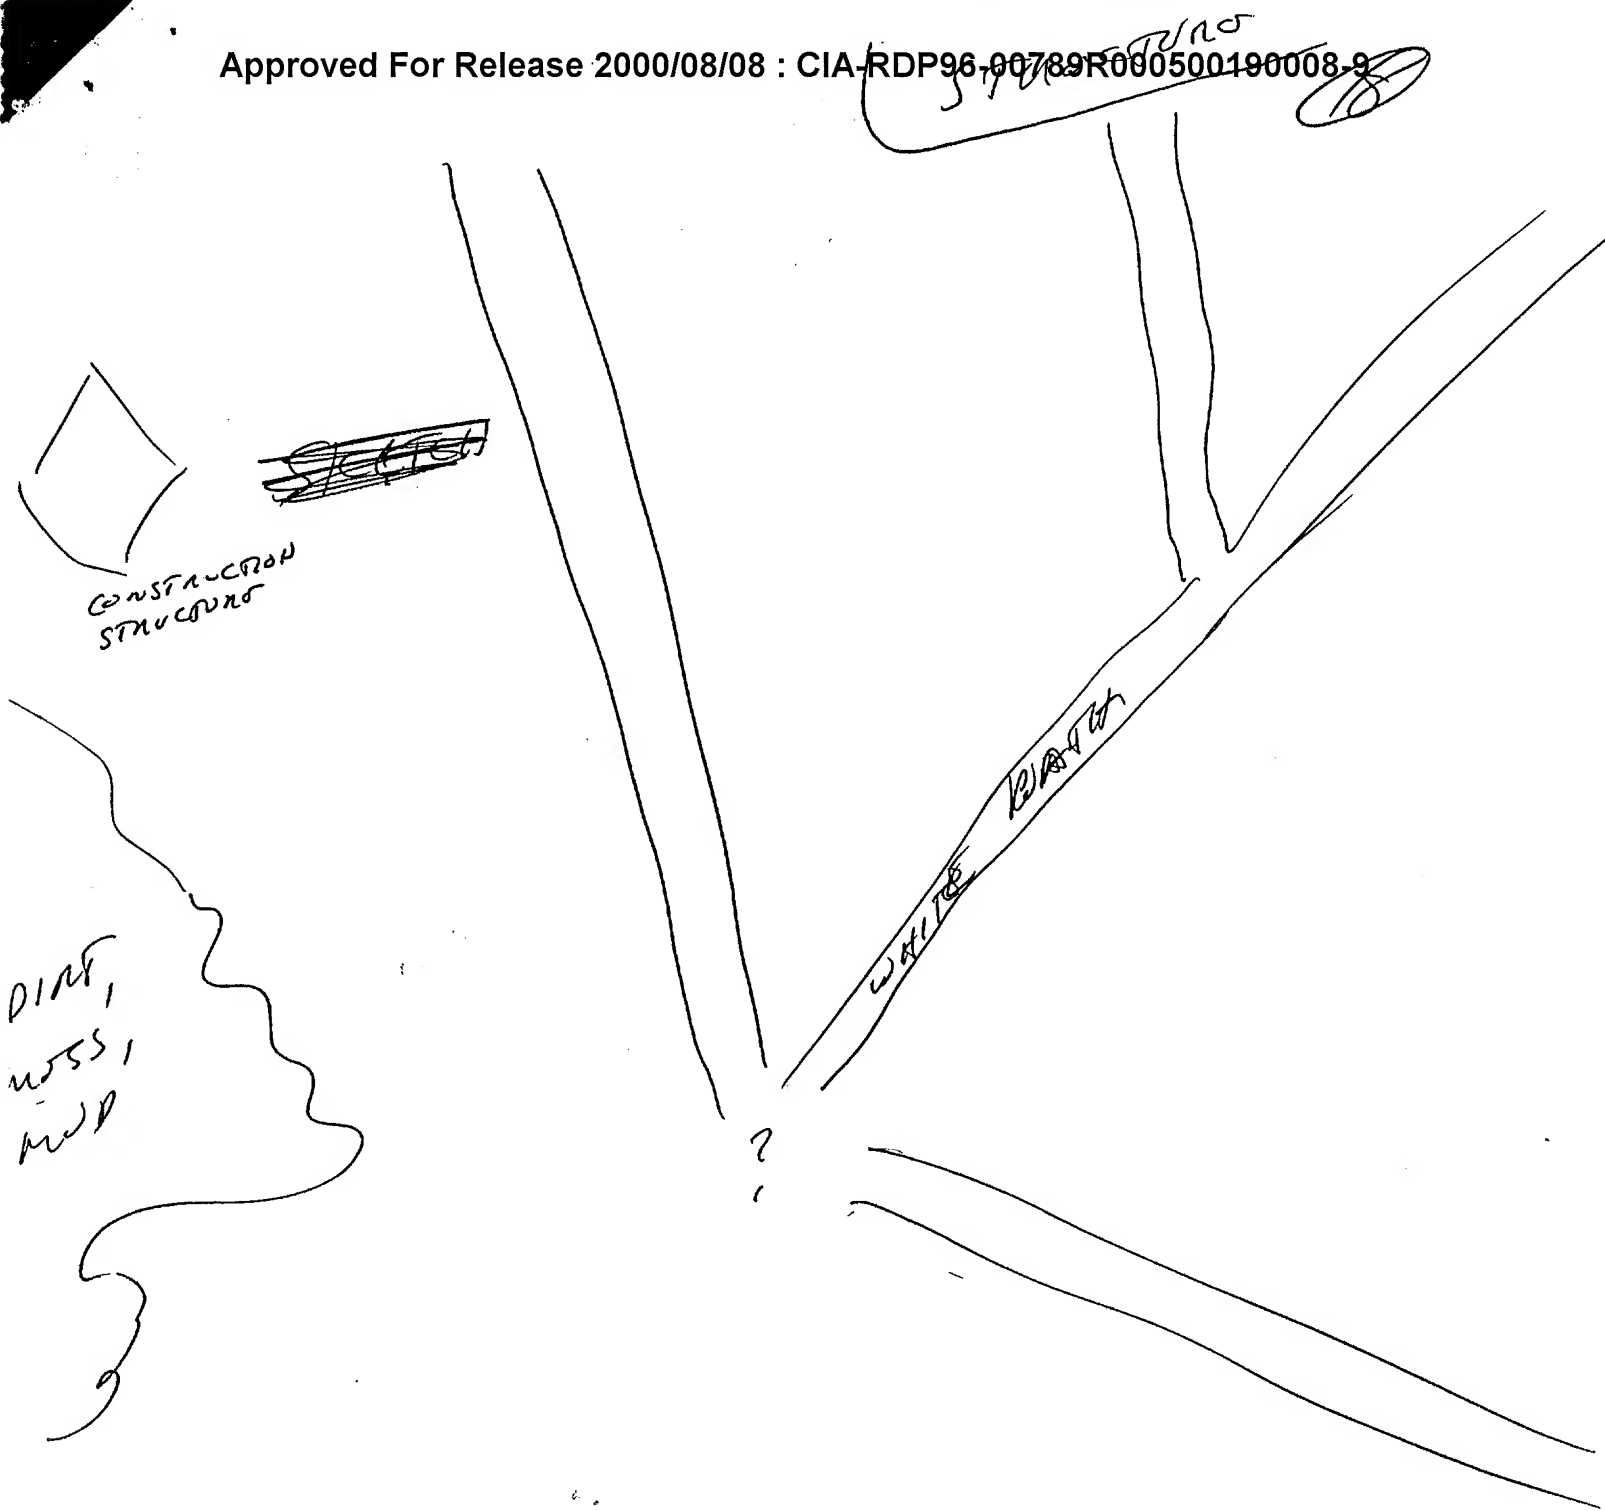

3. (S/NF/SK) COMMENTS: 018 answered both requirements, the overhead sketch is attached. 018 identified the most unique purpose and function as being the creation of a material. This involves a molecular-level change to a block of silvery material, forming an amorphous black material inside it. The material is not radioactive and can be held in the hand. It is capable of producing tremendous amounts of energy when activated. It does this by expanding to many times its original size. This is not by means of explosion but a fast, smooth, outward expansion does not stop. This results in a near-complete conversion from material to energy according to the law $E = mc^2$. Will ask 018 to go back and see if he can provide more detail in the overhead sketch.

WORKING PAPER

Project: 8914-I
Date: 890418
Viewer: 018
Session: 01

SUMMARY OF INFORMATION:

1. The target location is a green, flat, "park-like" area which has straight "walkways" which intersect at various angles (see page 8 of the transcript). There is construction at the site, consisting of earth-moving equipment, and a tall structure which is presently being built. There are several buildings opposite the building under construction. They are modern, and short in comparison to their height.
2. There is a man, integrally a part of the site, who is well educated, and very intelligent. He is very satisfied with his position as director of some portion of the site. He has feelings of great self-importance, and feels justified to have them. When asked about "the most unique aspect and function of this site", he became very smug about a special activity which takes place here; one which makes him smile and comment, "If they (outsiders) only knew!"
3. This special activity involves a molecular-level change to a block of silvery material, forming an amorphous black material inside it. This newly created material is not radioactive, and can be held in the hand. It is capable of producing tremendous amounts of energy when "activated", by expanding to billions of times its quiescent size. The impression is not that of an explosion, which simply resizes the material and stops, but of a fast, smooth, outward expansion which does not stop. Perception of a near-complete conversion from material to energy, according to the law, $e=mc^2$.
